

Same identity, more depth.

Chartroom is a blind historical-replay exercise: study a SOL/USDT chart cut off at a hidden point, ask the coach for verified facts, commit an analysis, then reveal. The interface should feel like a study room with an instrument in it, not a trading desk. Palette roles, font stack and layout are retained; surfaces, hierarchy and motion are rebuilt.

ASSUMPTIONS

Accent is the warm gold from the product description; coach is violet; replay boundary is copper so it never competes with the accent. Bull/bear are always paired with an arrow or word.

Hex values are inferred, not read from tailwind.config.ts. Retune when the repo is connected.

Font stack unchanged. Hierarchy comes from weight, tracking and eyebrows.

Nothing that happened next is ever hinted at: no prediction is animated, no score implies correctness, the hidden region is visibly withheld.

Why it reads as vibecoded Five findings, each with the fix side by side

01 · SURFACES

BEFORE

Visible range

138.20 – 143.85

SOL/USDT · 15m

A 1px mid-grey border on a flat fill is the default look of every generated dark UI. Panel and card sit on the same plane; nothing feels lit.

AFTER

Visible range

138.20 – 143.85

SOL/USDT · 15m · hidden +1h

Hairline as a box-shadow ring (crisp at any density), a 1px top light, contact + ambient shadows, and a 4% vertical gradient. The icon well gives every card an anchor.

02 · CONTROLS

BEFORE

Commit analysis

Reset view

Cancel

Flat fills read as clickable only because of colour. Primary and secondary differ in hue but not in weight or material.

AFTER

Commit analysis

Reset view

Cancel

Three materials, three weights: lit gold with a soft glow → raised control-surface → hairline ghost. Dark ink on gold keeps contrast above 4.5:1.

03 · SESSION STATE

BEFORE

Exploring

Submitted

Revealed

Completed

The four backend states are the spine of the product, but they're shown as a text breadcrumb. Nothing says "you can't go back" or "reveal is locked."

AFTER

Exploring

Submitted

Revealed

Completed

An inset track with the current state as a raised pill. A lock glyph on Revealed until the devnet receipt is confirmed. Advancing states is the one place the app earns a real transition.

04 · COACH TURN

BEFORE

Coach

"What's the RSI 14 on the selected candle?"

Coach answered aloud.

The coach's answers are verified facts, but the turn shows only "answered aloud". The most trustworthy thing in the product is invisible.

AFTER

Coach

Spoke · 2 verified facts · snapshot r7

"What's the RSI 14 on the selected candle?"

RSI 14 58.2

Close 142.60

Replay audio · 0:06

Header / transcript / facts / footer zones. Each fact is a chip bound to the snapshot revision — the spoken words become inspectable. Refusals get the same chip in copper: "Predictions · refused".

05 · LAYOUT RHYTHM

BEFORE

Chart and coach are two equal boxes with the same border and radius. The chart, which is the whole exercise, gets no more presence than the sidebar.

AFTER

CHART · HERO PLANE

COACH · INSET, CONTROLS RAISED

The chart is the lit hero with its hidden region hatched; the coach panel is an inset plane whose controls are raised. Radius scales with nesting (16 → 12 → 9).

Revised surface tokens

Additions to globals.css · existing names kept

DEPTH	
--ring-hairline	0 0 0 .5px rgb(255 255 255 / .11) — replaces border; crisp on 1× and 2×
--shadow-inner	inset 0 1px 0 rgb(255 255 255 / .07) — a 1px top edge, not a 2px blur
--shadow-contact	0 1px 2px rgb(0 0 0 / .55)
--shadow-ambient	0 10px 30px -12px rgb(0 0 0 / .8)
--fill-surface	linear-gradient(180deg, panel +3%, panel) — the tilt that makes it feel lit
--fill-control	linear-gradient(180deg, raised +4%, raised) + --shadow-inner at .10
--fill-accent	linear-gradient(180deg, accent +8%, accent -8%), ink-on-accent text, glow 0 8px 18px -8px accent/.6
--hatch-hidden	repeating 135° hatch at 5% white + dashed replay edge — the withheld future, never blank

TYPE RHYTHM (SAME STACK)

EYEBROW · 10.5 / .14EM · INK-FAINT

Title · 18 / 600 / - .01em

Figure · 142.60 · .nums

Base · 13.5 / 400 · ink

Support · 12 / 400 · ink-muted

Negative tracking on titles and figures is the cheapest way to make a system font feel designed. Eyebrows replace the generic small bold label.

PRINCIPLES

Decelerate in, accelerate out. Things arrive with a long tail (expo-out) and leave quickly (ease-in). Symmetric ease-in-out is only for things that stay on screen, like the voice orb.

Stagger by 40ms, cap at 6. Siblings never appear as one block; the eye reads order, which is what a chart-study tool is about.

Duration scales with distance and size. 150 press · 200 state · 350 enter · 500 for a pane or the reveal curtain. Small controls may settle with ≤4% overshoot; panels never overshoot.

The chart is exempt. Candles, axes, drawings and prices never animate. The reveal animates a curtain *over* the chart, not the candles under it.

Motion never editorialises. No celebratory motion on a correct direction, no shake on a contradicted claim. Findings appear with the same stagger regardless of result.

TOKENS	
--ease-enter	cubic-bezier(.16, 1, .3, 1) · expo-out · kept, now the default for anything appearing
--ease-settle	cubic-bezier(.25, 1, .5, 1) · kept · state changes, progress fills
--ease-exit new	cubic-bezier(.4, 0, 1, 1) · menus and dialogs leave in 120ms instead of vanishing
--ease-spring-soft new	cubic-bezier(.34, 1.3, .64, 1) · ≤4% overshoot · toggles, segmented pills, chips only
--ease-breathe new	cubic-bezier(.45, 0, .55, 1) · sine-like · voice orb, alternating
--motion-pane new	500ms · reveal curtain, mobile Chart↔Coach tab switch
--stagger	40ms · index-based delay, capped at 6 items

ENTRANCE

linear · 350ms · all at once

EMA 21RSI 14SMA 50MACD

ease-enter · 350ms

EMA 21RSI 14SMA 50MACD

ease-enter · 350ms · 40ms stagger

EMA 21RSI 14SMA 50MACD

Indicator chips, evidence findings and history cards all mount this way. The stagger is what makes it feel authored.

VOICE STATES

Listening

slow, wide breathe · 1600ms

Listening

Thinking

Speaking

Paused

One orb, one sine-like breathe. State changes only its period and amplitude — listening is slow and wide, thinking is tight and dim, speaking is quick — so the ear and eye agree without a label.

PRESS · FILL · REVEAL

Press me

Down: settle, 150ms, drop the top light.
Up: spring-soft.

Confidence fill · scaleX · ease-settle72%

Reveal · curtain 500ms ease-enter, candles 40ms stagger

WHAT TO CHANGE IN THE DOC

Replace the 1px/0.5px border with a box-shadow ring; keep the density caveat.

Split **surface** into **surface-hero**, **surface-inset** and **control-surface**; the coach panel is inset, the chart is hero.

Add **hatch-hidden** for the withheld region, **fact-chip** for verified coach facts, and the session-state track as a shared component.

Motion: add **ease-exit**, **ease-spring-soft**, **ease-breathe**, **motion-pane** and a stagger utility; menus and dialogs get a 120ms exit instead of closing instantly.

OPEN QUESTIONS

Fact chips assume the coach turn exposes its calculated facts to the UI — the backend has them; is surfacing them in scope?

Next screens to apply: feedback (findings with reason codes, no score), reveal (curtain + outcome figures), Your record, landing hero.

Connect the repo and I'll retune every hex to `tailwind.config.ts`.
